the new wave in communications  
Oceanic Broadband Solutions Pty. Ltd.

## Pay TV, Free-to-Air & Video-on-Demand

Oceanic Broadband Solutions, an Australian based company, has developed a unique method of delivering Pay TV, Free-to-Air and Video-on-Demand to the mining and hospitality sectors.

A single set-top box is used to display a combined TV experience. The service is delivered using Internet Protocol (IP) over the customer's local private network LAN.

Fast deployment can occur using our 200Mbps wireless products or using fibre/CAT6 cabling. A single cable can be provided into the accommodation room carrying combined TV, internet and telephony services.

The advantages of an IP based TV service or IPTV solution are as follows:

- Higher network reliability as no amplifiers, splitters or taps are required
- One engineering skill-set is necessary to maintain the LAN, internet, telephone and TV
- Foxtel or Austar Free-to-Air and Video-on-Demand are available on one set-top box
- Simple to use Electronic Program Guide (EPG) that maintains the original content provider schedule information
- New releases Hollywood movies are held locally on a video server for instant playback when you want to watch them!

Foxtel has accredited Oceanic Broadband Solutions Pty Ltd with their IPTV solution. They have verified the design and security encryption to comply with all Hollywood studios and major channel provider's criteria.

For the Pacific Islands we have content agreements with Oceanic Football Confederation, Australia Network and National Geographic channels and Sky News.
